A quick check by the EURA economic folks show that the combined GDPs of the two Germanies (FRG's \$800 billion and GDR's \$150 billion roughly) places it behind the US (\$3.3 trillion), USSR (\$1.8 trillion) and Japan (\$1.2 trillion). France, with a GDP of \$500 billion, ranks fifth. Interestingly, the FRG's ranking is not altered by adding the GDR's GDP.
